

CMC is pleased to announce the addition of a new [Makino a61nx Horizontal Machining Center](#) & a new [Mazak Multiplex 6200-II Y CNC Turning Center](#) to our equipment list.

The Makino has been integrated with our existing Makino machining centers via a [MMC2 Makino Machining Complex](#), an automated handling system that links the machines, pallet loaders and operators for maximum efficiency and lights out production.

The Multiplex provides multitasking capability with dual spindles and turrets, off center machining and rotary tool capability for highly efficient mid/high volume production.

Both align with our strategy to automate processes and improve efficiencies.

This new equipment is in addition to capital equipment investments and Quality System advances achieved earlier this year, which include;

Purchase and implementation of a new [OGP Optical Gaging System](#) in our Quality Lab. This system is a non-contact, multi-sensor dimensional measurement system that provides quick and efficient inspection of parts

Purchase and implementation of a new [Mazak CNC Press Brake](#) which further enhances our sheet metal capabilities

Certification to [AS9100](#) for Aerospace and Defense to complement our current ISO13485 and ISO9001:2008 certifications
